

INSTRUCTIONS:

1. Plug the unit into an outlet, clear from any obstructions that might limit the area of detection. **NOTE:** This unit has a built-in photo cell which disables the unit during daylight hours (or in any environment that has bright light). When selecting an outlet, be sure that the unit will not be exposed to bright light during the time in which you want the unit to operate. When plugged in, the red LED indicator light on the front of the unit will come on to confirm that the unit has power.
2. When initially plugged in, the light will turn on and stay on for approximately 40 seconds (warm-up period). During this time, the unit will not respond to motion. After 40 seconds, the light will flash three times to confirm that it is now in the mode to detect motion. **Remember:** The unit will only respond to motion at night, or when the unit is in a dark area.
3. Test the unit – This unit has approximately a 90° area of detection. Walk towards the unit until the light comes on. **NOTE:** The light is more sensitive when motion is moving across the front (side to side), as opposed to straight towards the unit. The light will turn off 90 seconds after all motion stops.

BULB REPLACEMENT:

Remove lens cover by gently pressing sides of the lens and removing. Unscrew light bulb. Screw in new bulb. Replace lens cover. Replace with 120V, 7 watt bulb.

CAUTION: Do not detach screws – Risk of electric shock.

WARNING: Risk of electric Shock. This product is not a toy and is not intended for use by children. For adult use only. For safe use, plug only into exposed wall outlets where nightlight is ventilated and cannot contact bed coverings or other material that may present a fire hazard. Do not use with extension cords. MATCH WIDE BLADE OF PLUG TO WIDE SLOT, FULLY INSERT.
