

Officina H2

Design
Dante Donegani,
Giovanni Lauda

Year
2002

Description

Officina is an archetypical suspension lamp: it is the typical enamelled technical metal lamp used in workshops. Officina is entirely made of glass: the diffuser is made of centrifuged glass, and the inner part is made of curved glass. It was conceived to provide two types of light (diffused and direct), and therefore functions with two sources of light: a high-performance fluorescent light bulb and a dichroic light bulb to create a concentrated light beam downwards. Thanks to the rotation switch, placed at the bottom of the lamp, it is possible to use the direct light separately. Its classical design, the type of lighting, and the colour of the glass make it perfect both for domestic and public environments, such as restaurants and bars.

Materials

Spun glass diffuser with extrawhite hot-curved, painted lower glass; pressed, varnished metal ceiling rose and an on/off switch for the lower light source on the diffuser.

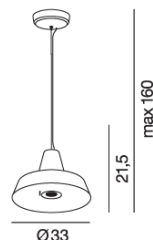

Certifications

CE IP20 

Uses

Suspension
