

INSTRUCTIONS FOR STAINLESS STEEL WATER FEATURES

Congratulations on your purchase of this stainless steel water feature. Your water feature has been manufactured to our strict specifications using high quality materials. To maintain the finish and keep your feature in excellent condition, it is important to adhere to the following points:

Important – Always use a dechlorinator when filling the feature with water or just topping up the water level.

*Do not use any other chemical water treatment or salt water.

*Do not use chlorine or bleach to clean the feature.

***Warning:**

*Make sure pump is fully immersed in water before plugging the pump in.

*Always unplug the water pump while cleaning the feature and the water pump.

*If you need to replace the pump, please refer to the original water pump to access the same specifications as the original.

***NOTE** – The feature is stainless steel, not stain proof, so will require regular maintenance as with all stainless steel appliances etc.

*Buff with paper towels or other non abrasive cloth with glass cleaner to wipe over polished surfaces, abrasive polishes and cloths will scratch or mark the polished surface.

*For brushed finish surfaces that need cleaning, use 3M Stainless Steel Cleaner and Polish available from your local hardware store.

*Due to each installation being unique, mounting bolts and/or concrete lag bolts must be sized according to mounting requirements and are not included and must be **PURCHASED SEPARATELY** available from your local hardware store.

***Reservoir base is optional** - requires pre-molded reservoir or may be installed into pond settings. See Aquafires MB-240 and MB-400 reservoir models (ask your representative for appropriate model to match your water feature)
