

Frequently Asked Questions: Glass Tile

1. What is the difference between the Stained Glass Series and the Mosaic Series?

The Stained Glass Series has an opalescent stained glass appearance, possessing colorful swirls and streaks. As a result of its opalescent nature, the color and grain of each tile varies, creating a custom look every time it is used. Available in a varied selection of colors and sizes. The Mosaic Series are transparent, semi-opaque glass tiles rich in color and texture. These 3/4" x 3/4" tiles have a smooth front and textured back for a more secure adhesive grip. Miter beveled edges provide for perfect angled corners.

2. How can these tiles be used?

Glass tiles work as a clever accent in a multitude of areas such as halls, bathrooms, kitchens, pools or large areas in hotels, banks and shopping centers in wall applications.

3. Can glass tiles be used as an alternative to ceramic tiles?

Yes, Diamond Tech Glass Tiles are sized to be compatible with standard ceramic tiles and are similar in installation and maintenance to ceramic products.

4. Will glass tiles break easily?

If dropped they may break. However, once installed Diamond Tech Glass Tiles are very durable and impervious to water, acids and other chemicals.

5. How are the tiles installed?

The Mosaic Series tiles are installed similar to ceramic tiles with a thinset mortar. In addition, the Stained Glass Series tiles can be assembled into panels, which are handled and installed more like a single piece of glass. For cutting the Stained Glass Series use a good quality wet saw with a diamond blade.
