ASSEMBLY

Your box(es) contain a base and a back. Depending on the model, the legs may or may not be attached. If not, gently tilt the base back and screw the legs into the pre-drilled holes. If the legs come with plastic washers, place them as shown before screwing the legs into the base.

Place the base on its legs on a carpeted surface to prevent the base from sliding while you attach the back. Locate the two steel posts inside the arms of the base and the two steel sleeves in the back. While the next step can be done by one person, an extra hand is recommended.

Slowly lower the back onto the steel posts making sure the posts and sleeves are properly aligned. Push until you hear a "click." The click indicates the back is secure. Pull the flap taut and secure to the Velcro strip under the base. Your new furniture is ready to enjoy!
