N°2 COPIE DELLA DICHIARAZIONE DI CONFORMITÀ PER VEICOLI DI TIPO OMOLOGATO.

LEGEND CONTROL PANEL BUTTONS

Dear Customer,

Congratulations on your purchase: the IMER plastering machine with incorporated horizontal axis mixing machine, resulting from years of experience, offers maximum reliability and innovative technical solutions.

- WORKING IN SAFETY.

Before using the machine, carefully read the following instructions as well as the instructions given in the attached manuals for the compressor and the Diesel engine.

This OPERATION AND MAINTENANCE manual must be kept by the firm's manager at the worksite, and be always available for consultation, together with the operation and maintenance manuals for the compressor and the Diesel engine.

The manual should be considered an integral part of the machine and must be kept for future reference (EN 12100-2) until demolition of the machine. If lost or damaged, another one can be requested from the Manufacturer.

The manual contains the EC declaration of conformity (98/37/EC) important information on worksite preparation, installation, use, maintenance and ordering spare parts. In any case, the user must have adequate experience and knowledge of the machine: the user must be trained by a person thoroughly familiar with the machine's use and operating procedures.

To guarantee the operator's safety, safe operation and long life of the machine, the instructions in this manual must be observed, together with the current regulations on safety and accident-prevention at work (use of adequate footwear, clothing, dust masks, gloves, glasses, etc.).

 - **Make sure warnings are always legible.**

 - **DO NOT make modifications of any kind to the metal structure or systems of the plastering machine.**

 - **Always work with the casing closed.**

Pay attention when opening the casing: on the inside there are very hot parts (in particular, engine, compressor, radiator), moving parts (alternator, motor fan, compressor flywheel) and there may be traces of harmful liquids (in particular, battery acid).

 - **Check the perfect efficiency of the safety devices, and in particular the emergency button and the devices for stopping mixer and agitator in case of opening of the grill and mixer material door and hopper grill.**

IMER INTERNATIONAL declines any liability in case of improper use, feed defects, lack of maintenance, unauthorised modifications, and partial or total non-compliance with the instructions contained in this manual.

1. TECHNICAL DATA

Table 1 gives the technical specifications of the plastering machine, with reference to figure 1.

2. DESIGN AND CONSTRUCTION STANDARDS

The pumps are designed and built in accordance with the standards given in table 1.

3. NOISE LEVEL

Table 1 gives the sound pressure levels of the plastering machine measured at the operator's ear (L_{pA} at 1 m - 98/37/EC) and the noise level in the environment (power L_{WA}) measured according to EN ISO 3744 (2000/14/EC).

4. DESCRIPTION OF PLASTERING MACHINE OPERATION

- The PLASTERING MACHINE is intended for use in building sites, for mixing and pumping conventional and premixed plasters and finishing coverings. The premixed materials must be declared pumpable with these types of machines by the producer.

4.1 DESCRIPTION OF PLASTERING MACHINE (see Fig. 1)

The main elements of the plastering machine are a hopper (ref. 1) inside of which there is an agitator (Ref. 2) that controls an eccentric screw pump (Ref. 3). The mix, prepared

with the horizontal axis mixing machine (Ref. 4) only provided for the SILENT300 machine, is poured into the hopper and pumped by the eccentric screw pump to the sprayer through the material delivery pipes. Air from the auxiliary piston compressor incorporated in the machine also reaches the sprayer and the material is thus sprayed on the wall. The machine is completed by a supporting casing on wheels (Ref. 5) incorporating a Diesel engine (Ref. 12), electrical panel (Ref. 9), pneumatic system, hydraulic system (Ref. 10) with variable delivery pump.

The machine is supplied with the material delivery pipes and a sprayer (Fig. 7).

The machine can be fitted with several accessories, and in particular a vibrating screen (DWG9,PAGE26), a cable remote control, a radio control, a spray nozzle for finishing surfaces and grooves and a hydraulically controlled pressure water cleaner.

The pressure water cleaner enormously facilitates end of day machine cleaning operations.

The machine can be supplied in the preparation for pumping self-levelling materials, therefore for use as a pump and not as a plastering machine. In which case, it is equipped with a more powerful Diesel engine, an eccentric screw with higher delivery, and is without an air compressor; the sprayer is not supplied but the remote control and screen are included (DWG.11,PAGE29).

The machine can be supplied in the version approved for towing on roads.

The type-approved towing set-up simplifies machine moving and placing operations.

5. GENERAL SAFETY INSTRUCTIONS (Fig. 1)

 - **Before using the plastering machine make sure the protection devices have not been removed. In particular check the following safety devices:**

- **Opening of the mixer grill must stop mixer movement by means of the device of Ref. 7**

- **Opening of the mixer material door must stop mixer movement by means of the device of Ref. 8**

- **Opening of the agitator grill must stop mixer movement by means of the device of Ref. 6**

The machine does not start if the side impact bar on the mixing machine side is not correctly fixed in the work position (Ref. 9).

 - **Never direct the sprayer towards anyone when the air and material pipes are connected: if the air hose is damaged it could cause accidental starting of the plastering machine.**

! - Always relieve the pressure before disconnecting the pipes, turning the eccentric screw in the opposite direction for a few seconds: the pressure gauge (Fig. 2) must indicate a pressure of 0 bar.

Fig. 2

! - After turning the eccentric screw in the opposite direction for a few seconds, squeeze the pipes to make sure there is no residual pressure inside before disconnecting them. If necessary, strike the pipe with a rubber mallet at the places where it is clogged.

! - Turn the machine off before accessing the agitator in the hopper or the mixing machine mixer.

! - The casing must be closed by key during use.

! - Always switch off the Diesel engine before opening the casing.

! - Pay attention when opening the casing, because there may be very hot parts and flammable and/or corrosive liquids inside the engine compartment.

The accident-prevention regulations and safety instructions must be observed in the work area.

In particular, there must be a completely free area of at least 1 metre around the machine and a flat treadable surface where only the machine operator stands.

When using the mixing machine, the operator must constantly make sure that no one else is near the work area.

Take care when handling bags of material, and avoid creating sprays which could come into contact with eyes or other parts of the body. Wear safety glasses and gloves. Do not raise dust, which could be inhaled. Always wear a mouth and nose mask during use.

! - The machine must not be used in places where there is risk of explosion and/or fire, or in underground excavations. The plastering machine does not have its own lighting, therefore the workplace must be adequately lit.

6. ELECTRICAL SAFETY

The SILENT 300 plastering machine has a 12 Vdc electrical system.

7. MECHANICAL SAFETY

The hazardous parts of the IMER plastering machine are protected by suitable safety devices, which must remain fitted and kept in perfect condition, such as the Diesel engine cooling fan guard and in particular the grills and the protection in the hopper and on the mixing machine, that prevent contact with the agitator and the mixer located inside the hopper and mixing machine: when the latter are opened the agitator and/or mixer automatically stop.

! - The grills must not be tampered with in any way or for any reason: tampering with the grills can be the cause of serious accidents at work with these types of machines.

8. TRANSORTABILITY AND TOWABILITY (Fig. 3)

Before moving the plastering machine it is advisable to lift the mixing machine, disconnect the material delivery pipe and air hose and, if present, the pressure water cleaner suction and delivery hoses and the cable control. This must always be done when lifting the machine.

There must also not be any material in the hopper or the mixing machine.

Fig. 3

! - Important! Before lifting or towing the plastering machine

- Always disconnect the material delivery pipe and air hose and, if present, the pressure water cleaner hoses.

- If present, remove the remote control and screen, which must always be carried separately.

- Always make sure all components of the machine are correctly secured and fixed and, in particular, that the mixing machine is secured with the safety pin.

To lift the machine, use the special point provided on top of the cab (Fig. 1, Ref. 15).

! - Important! Lift carefully because the machine can easily sway.

! - Important! Never use hooking points different from that indicated in figure (Fig. 1, Ref. 15) to lift the machine.

Use lifting equipment suitable for the overall weight of the machine indicated in table 1.

Before towing the machine, remove the pressure gauge (Fig. 2), correctly position the drawbar so that, with the machine and the last element of the drawbar horizontal, the coupling is at the height of the tow hook, correctly secure the various drawbar elements (Fig. 3) hook the safety cable, couple the lights cable, after lifting and locking the mixing machine with the safety pin (Fig. 1, Ref. 21) correctly position the side impact bar (Fig. 1, Ref. 9), lift and lock the stabiliser feet, check the tyre pressures and operation of the various luminous devices, make sure there are no elements of the plastering machine or various material (screen, bags of material, pipes, tools, etc.) on the machine, and make sure the machine is generally in order.

9. INSTALLATION (Fig. 4)

Position the plastering machine in a place where it is possible to have a completely free area of at least 1 metre around it and a flat treadable surface where only the machine operator stands. When using the mixing machine the operator must constantly visually make sure no one else near the work area, and therefore machine positioning should easily allow the meeting of that requirement.

The machine must also be placed in such a way as to use the least possible piping, without any obstacles during use and cleaning.

Place the machine, correctly positioning the support feet. The ground on which the machine stands must be firm, and in particular the feet support points (Ref. 1) must be very solid. Block the wheels.

! - Important! The machine must rest on a flat and firm surface, so as not to jeopardise the stability of the plastering machine during use.

Remove the safety pin from the mixing machine (Ref. 4). Make sure the mixer and hopper grill locking device (Ref. 2) is activated.

Fold and lock the side impact bar before lowering the mixing machine (Ref. 3): for safety reasons the motor will not start if that operation is not carried out.

Fig. 4

Fit the pressure gauge.

Extend the material delivery and air pipes from the machine to where the product is to be sprayed, avoiding tight bends or constrictions.

Properly tighten the cam-lock couplings (Fig. 5a/A), making sure to fit the gaskets and connect the sprayer to the pipe ends.

! - Only use original IMER pipes and fittings. The use of pipes and fittings not complying with IMER specifications can compromise correct machine operation as well as the safety of operators.

! - Before starting work, always check that the pipes, fittings and gaskets are in perfect condition.

If present, after correctly positioning it on the hopper, connect the vibrating screen plug to the special socket on the machine. If present (always present in the version for self-levelling material) connect the remote control to the special socket (Fig. 6, Ref. 1).

Fig. 5a

Fig. 5b

Fig. 6

10. ENGINE AND COMPRESSOR CHECK

Check the engine oil level and the Diesel fuel tank level before starting work.

10. START-UP (see Fig. 8/9/10)

After placing the machine, prepare three or four buckets of grout (50% water, 50% cement or lime). Pour the grout into the machine hopper or, if using colouring products, directly in the machine piping before connecting it. In which case pour about 30-40l of coloured product in the hopper.

Take the material pipes, make sure they are in good condition, the connections are integral and that the relevant gaskets are present, and connect them to the delivery manifold and the sprayer. Make sure the cam levers (A) of the connections are properly secured and that the gasket (B) is present as shown in Fig. 5a. Close the sprayer air cock (Fig. 7, Ref. 1). Open the air to machine cock (Fig. 6, Ref. 2).

Make sure the levers of the distributor (Fig. 8, Ref. 1) are all in the middle position.

NB: The SILENT 300A version only has the left lever (Fig. 8, Ref. 17), necessary for operating the pressure water cleaner, as described below (Fig. 8B).

Fig. 7

Make sure the impact bar on the mixing machine side is lowered and locked. Make sure the emergency button is not pressed (Fig. 8, Ref. 2), releasing it if necessary. Press the ON button (Fig. 8, Ref. 3) on the electrical panel, wait until the indicator light of the glow plugs (Fig. 8, Ref. 4) goes off then press the START button (Fig. 8, Ref. 5): the Diesel engine starts.

Fig. 8

The machine can be provided with an access code: in which case, after pressing the ON button, press the code entering button, then the 5-digit secret code - the numbers for entering the code are the small numbers on the bottom buttons of the panel - then press the code entering button again: the machine is now ready to operate.

Press the arrow button at the top of the dial with the eccentric pump symbol (Fig. 8, Ref. 6): the machine is now ready to pump

Operate the (+) delivery (Fig. 8, Ref. 7) and (-) delivery buttons (Fig. 8, ref.8) to adjust the delivery given on the display (Fig. 8, Ref. 10) to 60.

Open the air to sprayer cock (pneumatic control) (Fig. 7, Ref. 1). Otherwise the machine can be started using the electric remote control. The pump starts to turn slowly. When the electric remote control is connected, the REM button (Fig. 8, Ref. 11) must be pressed: the machine can only be controlled by the electric remote control. Wait until the grout has reached the level of the agitator or when coloured product comes out the sprayer. Now, stop the machine by means of the pneumatic or electric control, fill the hopper and

start work. Adjust the quantity of material delivered by the sprayer, using the (+) and (-) buttons.

The material cock (Fig. 7, Ref. 2) located on the sprayer for premixed and conventional materials must never be closed without firstly closing the air cock, in order to prevent early wear of the screw unit.

Press and hold down the arrow button at the bottom (Fig. 8, Ref. 12) to reverse the eccentric screw rotation direction.

Do not prolong this operation for more 4 or 5 seconds, so as not to damage the screw.

The pressure gauge (Fig. 8, Ref. 13) indicates the pressure of the eccentric screw pump control hydraulic circuit: it is normally between 60 and 100 bar, and rises to 240 bar in case of clogging or blocked screw due to a prolonged stop.

Try operating the mixing machine by means of the right mixer lever (Fig. 8, Ref. 15): with the top lever the mixer turns correctly; with the bottom lever it turns in the other direction.

Try lifting and lowering the mixing machine by means of the middle mixer lever (Fig. 8, Ref. 16).

The pressure gauge (Fig. 8, Ref. 14) indicates the pressure of the mixing machine control hydraulic circuit: it is normally between 60 and 140 bar, and rises to 200 bar in case of mixer blocking or during mixing machine lifting and lowering.

The left lever (shorter) of the distributor (Fig. 8, Ref. 17) is used for operating the hydraulically controlled pressure water cleaner: it must be in the middle position when the pressure water cleaner hoses are not connected to the water supply. Otherwise the pressure water cleaner will quickly become permanently damaged.

In case of an emergency, press the red emergency button (Fig. 8, Ref. 2) to stop the machine.

The SILENT 300A is equipped with a throttle lever for adjusting the Diesel engine speed from 2400 to 2800 RPM, which remains constant at 2400 RPM (Fig. 8B) in the SILENT300.

Fig. 8B

The machine must never be started or remain without material in the hopper during operation, otherwise this will cause early wear of the stator and screw.

- Never direct the sprayer at anyone.

12. OPERATION

- The hopper safety grill, mixing machine material door protection and safety grill must always be present and secured.

Do not put anything other than wet preprepared material in the hopper and anything other than preparation material in the mixing machine.

- Opening the mixing machine or hopper grill stops the relevant moving parts. Always check correct operation of the protection devices.

⚠ - Always operate with the casing closed by key. Always switch off the Diesel engine before opening the casing. There are very hot parts, acids (battery) and flammable liquids (oil and Diesel fuel) inside.

⚠ - Wear the required personal protection equipment before starting work.

Interruptions of more than 30 min. should be avoided, and in any case reduced to the minimum necessary when using rapid-drying materials.

A prolonged stop can cause clogging in the material delivery pipes: no material comes out the sprayer and the pressure gauge indicates a higher pressure than the normal working value.

Press the "down arrow" button (Fig. 8, Ref. 12) (the opposite of the normal work position), the mortar pump motor turns in the opposite direction and the pipes are depressurised. Stop the machine as soon as the pipe becomes easy to squeeze (the pressure gauge reads 0 bar).

Locate the clogging in the hose and eliminate it by striking the hose with a rubber mallet and completely empty it by hand.

⚠ - If necessary, disconnect the sprayer or open the pipe connections, firstly making sure there is no residual pressure inside the pipes. The material pressure gauge must indicate 0 bar and the pipes must be soft, except the clogged part.

The operator carrying this out must be specially trained in these procedures.

Reconnect the pipes and sprayer, turn the main switch to the correct position and restart the machine.

⚠ - Do not move the machine when the hopper or mixing machine are full.

A decrease in material delivery to the sprayer may indicate a worn pump. Try gradually tightening - one turn at a time - the screws of the pump clamp (Fig. 9, Ref. 3) located under the

Fig. 9

guard (Fig. 9, Ref. 2) and check if that solves the problem. Otherwise, to replace the pump, carry out as follows. Bring the delivery to minimum and stop the machine in a position where

the eccentric screw drawing bolt (Fig. 9, Ref. 1) can be easily removed. With the machine empty and clean, and with the engine switched off, lift the hopper grill (Fig. 9, A), loosen the pump clamping stay bolt nuts, remove the screw drawing bolt (Fig. 9, Ref. 1) then remove the screw and stator (Fig. 9, B) at the same time.

To insert the screw in the stator, use the lubricant spray available from IMER. Never use mineral oil or grease for fitting the screw, as this may damage the stator. Avoid all benzenes.

Refit the pump making sure to insert the agitator in the special spaces.

Whenever the fuel reserve light flashes during work, the machine will automatically stop in about 20 minutes if refuelling is not carried out, in order to avoid pointless lost time due to the engine shutting down due to no fuel.

If an engine, electrical or hydraulic system anomaly occurs, preventing the continuation of work, promptly wash the machine and pipes. Also, disassemble the pump, remove the screw from the stator and clean it. On completion reassemble all components.

13. MACHINE STOPPING AND CLEANING

At the end of work, stop the machine - press the arrow button at the top and bring the mixing machine operation lever to the middle position - after completely emptying the mixing machine and hopper of material.

Fig. 10

Fig. 11

⚠ - Before disconnecting the sprayer or pipes, make sure there is no residual pressure inside them.

- Open the sprayer air cock, disconnect the sprayer and wash it thoroughly, cleaning the nozzle with the special tool supplied.
- Disconnect the material pipes from the delivery manifold.
- Open the mixing machine grill and wash it thoroughly.

⚠ - If the inside of the mixer has to be accessed during the operation, firstly switch off the Diesel engine.

- Empty the mixing machine by removing the plug (Fig. 11) or emptying it in the hopper.
- Open the discharge on the bottom of the hopper (Fig. 10)

- Wash the hopper thoroughly.
- Close the hopper discharge and fill the hopper with water.
- Restart the machine for a few seconds until clean water comes out the manifold: this ensures complete cleaning of the pump.

If the pressure water cleaner is present, after connecting the suction pipes (Fig. 12, Ref. 1) to a water supply with an adequate flowrate (at least 25 l/min) - **do not suck water from a drum** - and the delivery pipes, with the lance supplied, to the connection on the machine (Fig. 12, Ref. 2), start it with the left lever (shorter) of the distributor (Fig. 8, Ref. 17) and begin washing operations.

Make sure not to accidentally operate the pressure water cleaner control lever during work: by turning empty it will quickly become permanently damaged.

! - Never direct the water jet at anyone. Never direct the water jet towards the electrical panel or other delicate parts of the machine. Do not use the pressure water cleaner to clean inside the plastering machine.

- For cleaning, fill the hopper with clean water.
 - Insert two washing sponges in the pipes still full of material and refit the the piping on the manifold (Fig. 13).
 - Start the machine again so that clean water comes out.
- If there is even slightest chance of freezing, open the hopper discharge, disconnect the pipes and completely drain the water.

Fig. 12

14. MAINTENANCE

! - Do not move the machine with the mixing machine or hopper full of material.

! - Maintenance must be performed by expert personnel, after switching the machine off.

If, due to an anomaly, the plastering machine stops during work, promptly wash the machine and pipes.

Fig. 13

Make sure there were no oil leaks from the hydraulic system, engine or the compressor during the stop. In case of doubt, check the oil levels with the machine perfectly flat.

Perform the periodical maintenance operations specified in the Diesel engine manual.

Fig. 14

14.1 DAILY MAINTENANCE

Every day, at the end of work and with the machine running, grease the two mixer shaft support points (Fig. 14, Ref. 1) and the agitator support by means of the grease nipple shown in Fig. 14, Ref. 2.

A grease pump is supplied with the machine for that purpose. The operation is complete when grease comes out of the shaft glands.

Do not apply more grease, so as not to pollute the material to be pumped at the start of work.

Every day, check correct operation of the safety devices, and in particular the grill safeties (Fig. 1, Ref. 6,7,8,9,21), and the emergency pushbutton (Fig. 8, Ref. 2).

Top-up the fuel tank at the end of work.

Check the engine oil level at the start of work.

At the start of work, make sure there were no oil leaks from the hydraulic system, engine or the compressor during the stop. Check the oil levels with the machine perfectly flat.

14.2 WEEKLY MAINTENANCE

Every week a specialised person must grease all the required points on the machine and also perform a general machine check.

In particular, make sure:

- the mixer shaft and agitator seals are in good condition
- the flexible coupling in the hopper and the eccentric screw drawing bolt are in perfect condition.
- the delivery manifold is clean and not worn, the pressure gauge is efficient;
- the air filter is clean; replace it if necessary;
- the compressor belt is in good condition and correctly tightened;
- the engine and hydraulic system radiators are clean;
- the battery is charged, the level and specific gravity of the electrolyte are correct.

Also make sure:

- the pipes, connections and respective gaskets and supports are in good condition and properly tightened;
- the distributor, solenoid valves, pressure gauges and pressure switches are efficient.
- In general, that the entire machine and relevant accessories are perfectly efficient.

All the indications regarding the type and frequency of intervention given in the Diesel engine operation and maintenance manual must be respected.

After the first 50 hours, in addition to the maintenance operations indicated in the Diesel engine manual, and in particular, oil change, oil filter change and Diesel oil filter change, check the tension of the alternator belt, change the compressor oil and the hydraulic circuit oil filter.

DWG. 2 - OILS AND GREASE FOR MAINTENANCE -		
Ref.	Code	I
1	2246869	OIL FOR HYDRAULIC SYSTEM: AGIP "OSO 46"
2	3225364	DIESEL ENGINE OIL URANIA/T
3	3225364	COMPRESSOR OIL DICREA 150
4	2246890	GREASE "GR MU3"

14.3 SIX-MONTHLY MAINTENANCE

Every six months have the machine checked by an authorised IMER assistance centre.

 - **Old oil is special waste. Therefore it must be disposed of according to the current regulations.**

 - **Always keep the wordings and indications on the machine legible.**

In particular, every 500 hours or 6 months (whichever comes first) have the hydraulic system filter changed and every 1000 hours or 1 year (whichever comes first) have the hydraulic system and compressor oil changed.

15. REPAIRS

 - **Repair, maintenance or lubrication operations must always be carried out with the machine stopped and the engine switched off, except for the greasing indicated in par. 14.1.**

All maintenance operations, except for daily maintenance in any case to be carried out by professionally qualified personnel, can only be performed by specialised personnel.

Only use original IMER spare parts, which must not be modified.

 - **If any guards are removed for repairs, ensure they are correctly refitted at the end of work and check the operation of protection devices.**

NOTE:

IMER INTERNATIONAL reserves the right to modify the characteristics of the plastering machine and/or the contents of this manual, without having to update the previous manuals and/or machine.

PROBLEMS	CAUSES	CURES
THE ENGINE DOES NOT START	FLAT BATTERY	CHARGE/REPLACE THE BATTERY
THE MIXER STOPS DURING OPERATION	- GRILL OPEN - MIXER TOO FULL OR MATERIAL TOO HARD - NO PRESSURE IN HYDRAULIC CIRCUIT (PRESSURE BELOW 180/200 BAR)	- CLOSE THE GRILL - ADD WATER TO THE MIX - CHECK THE SETTING OF THE PRESSURE RELIEF VALVES ON THE DISTRIBUTOR: THIS OPERATION MUST BE CARRIED OUT BY QUALIFIED PERSONNEL
THE MACHINE DOES NOT START ON OPENING AIR TO THE SPRAYER	- DIRTY NOZZLE - AIR PRESSURE SWITCH NOT CALIBRATED	- CLEAN THE NOZZLE - CHECK THE SETTING OF THE PRESSURE RELIEF VALVES ON THE DISTRIBUTOR: THIS OPERATION MUST BE CARRIED OUT BY QUALIFIED PERSONNEL
THE MACHINE DOES NOT STOP WHEN THE AIR IS CLOSED	AIR PRESSURE SWITCH NOT CALIBRATED	- CHECK THE SETTING OF THE PRESSURE RELIEF VALVES ON THE DISTRIBUTOR: THIS OPERATION MUST BE CARRIED OUT BY QUALIFIED PERSONNEL
MIXER BLOCKED (OIL PRESSURE GAUGE AT 200 BAR)	MATERIAL TOO DRY	ADD WATER TO THE MIX
AGITATOR PUMP BLOCKED (OIL PRESSURE GAUGE AT 250 BAR)	CLAMP TOO TIGHT WORK PRESSURE TOO HIGH	- LOOSEN THE CLAMP SCREWS - MODIFY THE MIX, REDUCE THE LENGTH OF THE PIPES, OR USE LARGER DIAMETER PIPES
THE MATERIAL DOES NOT PASS THROUGH THE SPRAYER NOZZLE	PIPE OBSTRUCTED ENCRUSTED MATERIAL ON HEAD OBSTRUCTING THE PASSAGE CLAMP NOT PROPERLY ADJUSTED	- POOR MIX, MODIFY IT - PAUSE TOO LONG, REDUCE THE PAUSE TIMES - CLAMP NOT CORRECTLY ADJUSTED, CORRECTLY ADJUST IT - CLEAN THE DEFLECTOR AND SPRAYER, IF NECESSARY - ADJUST THE CLAMP
DURING OPERATION, THE MATERIAL TENDS TO DRIP FROM THE SPRAYER	THE DIAMETER OF THE NOZZLE OR DEFLECTOR IS TOO LARGE	REPLACE THE DEFLECTOR AND/OR NOZZLE WITH ONE OF SMALLER DIAMETER
DURING WORK, THE MATERIAL REACHES THE SPRAYER UNEVENLY	BENT AIR HOSE OR SPRAYER NOZZLE BLOCKED	MAKE SURE THE AIR HOSE AND NOZZLE ARE FREE

5. - Matricola N°:
- Numero de série:
- Serial number:
- Serie Nummer:
- Numero de serie:

6. - E' conforme ai requisiti della Direttiva Macchine (98/37/CE), ed alla legislazione nazionale che la traspone.

- Est conforme aux dispositions de la Directive "Machines" (98/37/CE), et aux législations nationales la transposant.
- Complies with the provisions of the Machinery Directive (98/37/EC), and the regulations trasposing it into national law.
- Konform ist mit den einschlägigen Bestimmungen der EG-Maschinenrichtlinia (98/37/EG) und deren Umsetzung durch die Gesetzgebung des jeweiligen Bestimmungslandes.
- Corresponde a las exigencias básicas de la directiva de la CE sobre màquinas (98/37/CE) y la correspondiente transposició a la nacional.

7. - E' conforme alle condizioni delle seguenti altre direttive: 89/336/CEE; 73/23/CEE; 2000/14/CE; 97/23/CE ed alla legislazione nazionale che la traspone.

- Est conforme aux dispositions des Directives suivantes: 89/336/CEE; 73/23/CEE; 2000/14/CE; 97/23/CE et aux législations nationales la transposant.
- Complies with the provisions of the following other directives : 89/336/EEC; 73/23/EEC; 2000/14/EC; 97/23/EC and the regulations trasposing it into national law.
- Die Maschine ist konform mit folgenden weiteren EWG-Richtlinien : 89/336/EWG; 73/23/EWG; 2000/14/EG; 97/23/EG und deren Umsetzung durch die Gesetzgebung des jeweiligen Bestimmungslandes.
- Està, ademàs, en conformidat con las exigencias de las siguientes directivas de la CEE: 89/336/CEE; 73/23/CEE; 2000/14/CEE; 97/23/CEE y la correspondiente transposició a la nacional.

8. - Inoltre dichiara che sono state applicate le seguenti (parti/clausole di) norme armonizzate:

- EN 12100-1; EN 12100-2; EN 60204-1;
- EN ISO 3744 con livello di potenza sonora misurato $L_{WA}=96$ dB e livello di potenza sonora garantito $L_{WA}=99$ dB.
- Et déclare par ailleurs que les suivants normes harmonisées ont été appliquées: EN 12100-1; EN 12100-2 EN 60204-1; EN ISO 3744 avec niveau de puissance sonore mesuré $L_{WA}=96$ dB et niveau de puissance sonore garanti $L_{WA}=99$ dB.
- The following national technical standards and specifications have been used : EN 12100-1; EN 12100-2; EN 60204-1; EN ISO 3744 with measured sound power level $L_{WA}=96$ dB and guaranteed sound power level $L_{WA}=99$ dB.
- Im Weiteren erklären wir, dass folgende harmonisierten Normen (Auszüge/Klauseln) angewandt wurden: EN 12100-1; EN 12100-2 EN 60204-1; EN ISO 3744 mit gemessenem Schalleistungspegel $L_{WA}=91$ dB und garantiertem Schalleistungspegel $L_{WA}=93$ dB.
- Ademàs declaramos que las siguientes normas armonizadas fueron aplicadas: EN 12100-1; EN 12100-2; EN 60204-1; EN ISO 3744 con nivel de potencia sonora medido $L_{WA}=96$ dB y nivel de potencia sonora garantizado $L_{WA}=99$ dB.

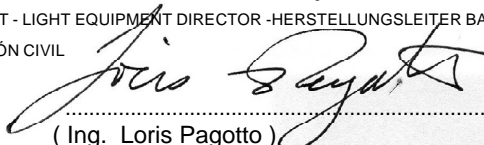

9. - La procedura per il controllo di conformità utilizzata è in accordo all'Allegato V della 2000/14/CE.

- La procédure utilisée pour le contrôle de la conformité est en accord avec l'annexe V de la directive 2000/14/CE.
- The procedure used for the conformity test is in agreement with attachment V of European Directive 2000/14/EC.
- Das angewandte Verfahren für die Konformitätskontrolle ist in Übereinstimmung mit Anhang V der Richtlinie 2000/14/EG.
- El control de conformidad se determina con arreglo al anexo V de la directiva 2000/14/CE.

TIMBRO DEL RIVENDITORE

IMER International S.p.A. garantisce all'acquirente l'acquisto di una macchina nuova, integra in ogni suo componente e che i materiali IMER sono controllati esenti da vizi o difetti di fabbricazione.

CONDIZIONI DI GARANZIA

Per la validità della garanzia occorre che venga restituito all'azienda opportunamente compilato, il relativo modulo allegato al manuale di uso e manutenzione. Per garanzia si intende la riparazione e/o sostituzione di quelle parti che risultassero difettose di fabbricazione. E' esclusa la sostituzione integrale.

Per tutti i beni prodotti, la garanzia delle parti che risultassero difettose di fabbricazione, è di **dodici mesi** dalla data di spedizione o consegna all'utilizzatore. La garanzia sul motore endotermico è assicurata dal relativo fabbricante.

I materiali ritenuti difettosi dovranno essere fatti pervenire presso il ns. stabilimento, franco destino, e dopo benestare tecnico sarà riconosciuto e inviato il materiale in porto assegnato. Restando in ogni caso a carico esclusivo dell'acquirente tutte le spese di mano d'opera e trasferte relative alla riparazione o sostituzione eventualmente eseguite presso l'acquirente in base alle tariffe pubblicate dall'ANIMA.

L'applicazione della garanzia è subordinata al rigoroso rispetto delle istruzioni indicate nel manuale di uso e manutenzione ed alla esecuzione puntuale degli interventi di manutenzione previsti eseguiti da personale di assistenza autorizzato IMER. La garanzia non copre i danni causati da condizioni ambientali particolari non previste (ad es. ambienti corrosivi, scariche atmosferiche, calore, immersione) o calamità naturali.

Il fabbricante non sarà responsabile per gli eventuali danni a terzi consequenziali all'uso della macchina od attribuibili indirettamente ad essa, né sarà imputabile per danni da perdita di profitto imputabile a sosta forzata, qualunque ne sia la causa.

La garanzia viene a cessare quando:

- 1) I prodotti venduti vengono modificati, riparati, smontati o comunque manomessi dall'acquirente o vengono sugli stessi montate attrezzature o altri accessori, non espressamente forniti o autorizzati dalla venditrice o sui quali siano stati utilizzati ricambi non originali.
- 2) I prodotti venduti non vengono usati o montati in modo conforme alle indicazioni della venditrice, o per negligenza od errori da parte dell'utilizzatore.
- 3) Vengono impiegati combustibili e lubrificanti inadatti, in caso di ostruzione di prese d'aria o scarichi o di problemi causati da bulloneria evidentemente allentatasi nell'uso e lasciata tale.
- 4) Le riparazioni effettuate in garanzia non interrompono il periodo della garanzia stessa.
- 5) I collegamenti elettrici non sono effettuati secondo le ns. disposizioni causando danno ai componenti elettrici.

Il rivenditore, all'atto della consegna, è incaricato di trasmettere all'acquirente finale il manuale fornito con la macchina, contenente le necessarie istruzioni, affinché la macchina venga usata solamente dopo che l'operatore le abbia ricevute e lette.
