

ADJUSTABLE  
WORKSURFACES | AIRTOUCH

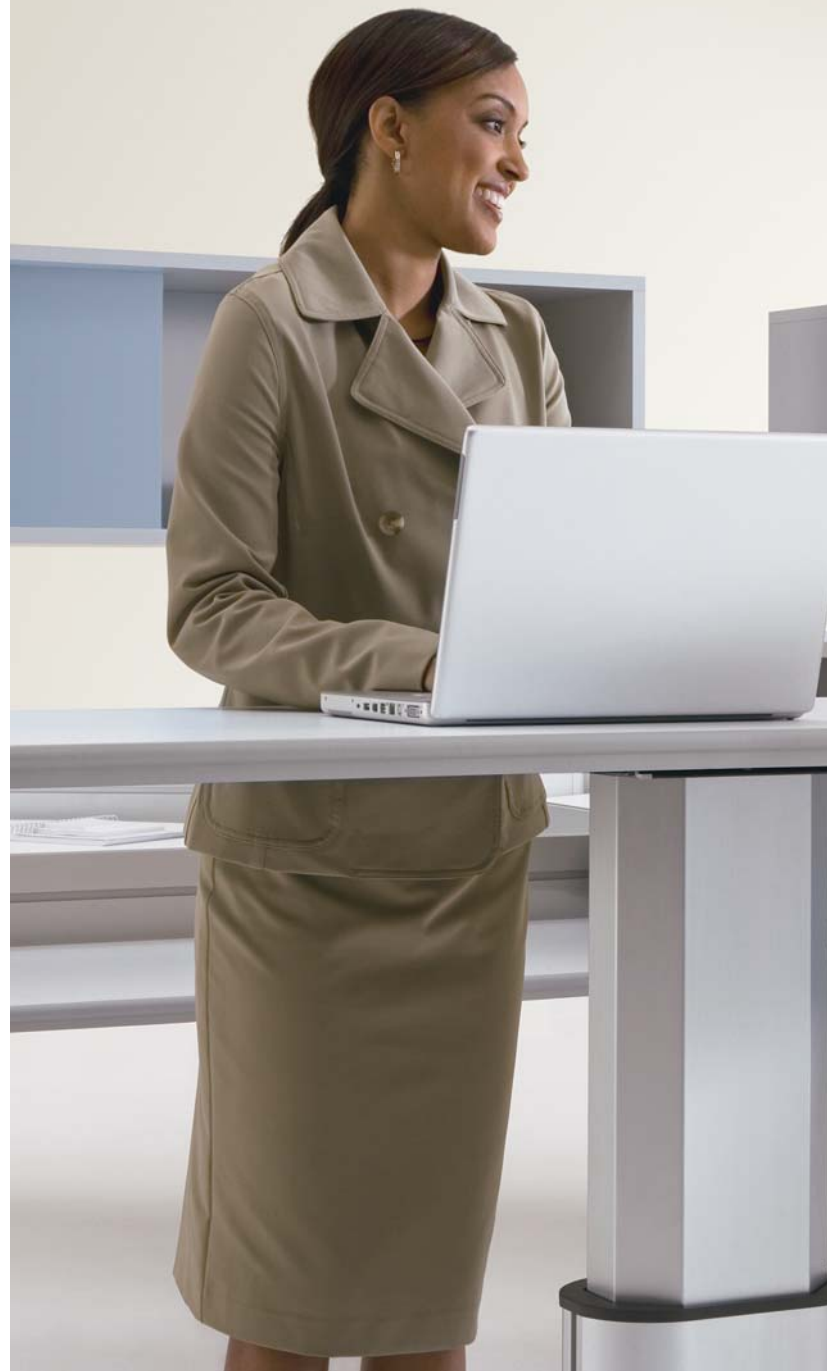

Steelcase

Lifts with just a touch.  
Feels like it's floating on air.

**A smart approach to adjustability.**

When you think of smart design, you probably think of objects that fill a need beautifully and simply. When you think of examples of smartly designed products, you probably don't immediately envision adjustable workspaces. Airtouch™ adjustable workspaces may change that. Patent-pending Airtouch technology uses an innovative new mechanism to adjust far faster than crank or electric units and with far less effort than counterbalance units. It operates with just your touch. There are no electrical components, so no power cords to tie it down. You can use Airtouch almost anywhere. Smart adjustability designed with you in mind.

**Ergonomics made simple (and quick).**

You'll feel the ergonomic difference of an adjustable-height worksurface. It allows you to personalize your workspace and match the height of your table to your task. According to a recent study, people who use sit/stand workspaces report significantly less musculoskeletal discomfort and disorders.

So how do you get the most out of your adjustable-height worksurface? With adjustments that are simple and quick. Airtouch raises and lowers with a light touch. You determine how fast it travels. It can move quickly (17 inches in 1.2 seconds) or slowly — you're in control. Smooth? Always. Whether you're adjusting up or down, you will get the same, smooth movement you will come to love.

42%

Most workers stand at least 42%  
of the time, during an average day.

**Need privacy?**

Optional screens can be mounted above or below the worksurface and are available in knit or laminate.

**Supporting collaboration where it really happens.**

How well does your personal workspace support not only your individual work, but also your work with one other person? Research reveals that dyadic, or “pair”, work is the key to more learning, greater speed and more innovation. Surprisingly, most of these “you and I” interactions happen in your personal workspace.

An Airtouch adjustable worksurface makes your space more comfortable for you. It can also make your space better for working in pairs. Standing meetings are typically shorter than sit-down meetings. When a co-worker walks up for a quick meeting, raise your worksurface in an instant to share your screen and paperwork at a comfortable level for two. Lower the worksurface when it's time to get focused.

Because Airtouch adjusts so quickly and easily, it can help you tailor your environment to the moment, allowing easy transitions from individual to shared work. Take control of your workspace ... and your productivity.

**Simple adjustment.**

Ergonomic lift-handle is comfortable and convenient for effortless control.

## Specifications

**Height range:** 26" - 43" with infinite increments

**Adjustment speed:** seated height to standing height in 1.2 seconds

**Recommended Load Capacity:** up to 25 lbs. (designed for laptops and flat screen monitors)
