

#### WHY CLEAN JETTED TUBS? OH YUK!

Jetted tubs have stagnant water in their plumbing lines that is a perfect breeding ground for dangerous viruses and bacteria. There is about 15-20 feet of plumbing in the average tub that needs to be cleaned after each use. This residue in the plumbing lines can be a variety of contaminants releasing from an individual's body when bathing. This residue in the plumbing lines can lead to a microbial buildup also known as biofilm. Large amounts of biofilm can result in high exposure to bacteria, a leading cause of infection in the body. Are you Traveling? Bring this product and use it in your hotels jetted bath tub before use.

#### INSTRUCTIONS

1. Fill tub with warm water. Make sure the water is high enough over the jets so you can turn the jets on.
  2. Run the tub with jets on.
  3. Add Oh Yuk
- Initial Cleaning: 1 hour - Maintenance cleaning: 15 minutes
- 4) The longer you let Oh Yuk run through the plumbing lines, the better job this will do cleaning them.
  - 5) Drain the tub.
  - 6) Clean the scum ring and surface of the tub with a good cleaner.
  - 7) Fill tub over the level of the jets, turn on jets for a few seconds, then drain the tub.

#### DOSE

INITIAL TREATMENT: 8oz/1,000 gallons

Also use initial treatment dosage if it has been a while and prior to draining the hot tub.

MAINTENANCE: 4oz/1,000 gallons
