

Enclume

Gourmet Island GI1

Enclume's display, baking and storage units are the ultimate in quality, design, strength and function. Congratulations for selecting one of the finest multi-function kitchen units manufactured today.

WARNING:

Please read all of these instructions before assembling and using your Gourmet Island

Enclosed you will find everything needed for the assembly of your Gourmet Island. Two people working together make assembly much easier. Please unpack, identify and lay out all of the pieces before starting assembly.

Components:

- 2 – Steel shelf rims
- 1 – Wood butcher-block work surface
- 1 – Steel oval trim band
- 2 – Steel grid shelves

Hardware:

- 1 – 7/32" Allen wrench
- 1 5/32" Allen wrench
- 4 – 1/4" x 7/8" Button head screws
- 20 – 3/8" x 1/2" Button head screws

See reverse side for Assembly and Installation Instructions.

It is important that your rack is assembled correctly. If the unit is assembled or used incorrectly, it could become unstable and collapse, possibly causing injury.

This product is warranted to be free of material defects for a period of one year from the date of purchase. Customer's exclusive remedy for breach of this warranty shall be the repair or replacement of the defective product when delivered, postage prepaid, to Enclume Design Products, Inc. at 24 Colwell St. Port Hadlock, WA. 98339. There is no other warranty, expressed or implied, and there is specifically NO WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. In no event will Enclume Design Products, Inc. be responsible for any incidental or consequential damages.

Assembly and Installation Instruction for the Gourmet Island

Components:

- 2 – Steel shelf rims
- 1 – Wood butcher-block work surface
- 1 – Steel oval trim band
- 2 – Steel grid shelves

Hardware:

- 1 – 7/32" Allen wrench
- 1 5/32" Allen wrench
- 4 – ¼" x 7/8" Button head screws
- 20 – 3/8" x ½" Button head screws

Assembly and Installation Instructions:

- 1) Please proceed carefully and slowly through the following instructions to insure this unit assembly properly for safe use and without damage to its wood and steel finishes. Haste in assembly could result in needless scratching or marring.
- 2) Lay the rectangular uprights on the floor in correct relationship to each other – about 24" apart. The long side of the uprights with the double holes punched should be placed against the floor.
- 3) Slide the shelf rims inside the rectangular uprights one at a time. **Notice the rivet placement around the ovals.** The rivets will be closer to the bottom of the rim than the top. The positioning allows the steel grid shelves to set deeply inside the shelf rims. Align holes from the shelves to holes in the rectangular uprights and attach from outside the uprights through the inside of the shelves with four 3/8" x ½" "button head screws per shelf. **Leave the screws loose.**
- 4) Stand the unit upright and attach the shelves to the other side using eight of the 3/8" x ½" button head screws in the same manner as done in Step 3. **Leave the screws loose.**
- 5) Attach the steel oval trim band to the outside of the rectangular upright. This uses the remaining four 3/8" x ½" button head screws.
- 6) Square up the entire unit using a carpenter's square and **tighten down all screws.**
- 7) Slide the two oval grid shelves into the lower and middle shelf rims with the long wire of the grid facing upward.
- 8) Place the wood butcher-block work surface on the top of the unit, rough surface facing down. The work surface should have a 1" overhand around the oval trim band. Align the holes in the bottom of the work surface with the slotted holes on the tops of the rectangular uprights. Attach the work surface with ¼" x 7/8" button head screws, inserting the screws upward through the slots in the uprights through the holes in the bottom of the work surface and tightening them down with the smaller 5/32" Allen wrench provided.
- 9) Your Gourmet Island is manufactured out of the finest materials, with finishes applied to enhance beauty, increase durability and minimize maintenance. Nevertheless, some care must be taken to insure the highest performance of the unit. Accordingly please take note of the following.
 - a) The steel sections of your Gourmet Island are coated with an industrial finish designed to give years of protection. Cleaning can be done easily with a damp cloth. Dry thoroughly after cleaning. If the finish ever needs a touch-up, use a "Pledge" type product.
 - b) The wood butcher-block surface has been penetrated with a food-grade mineral oil and its edges sealed. To maintain the natural beauty of the wood and to avoid possible splitting with swings in humidity, we strongly recommend oiling the entire wood surface every four to six weeks.
