

GG5515

AC Power

4 120 volt AC outlets supply standard AC power to any appliance not exceeding 1500 watts. This allows use of appliances like microwave ovens, computers, modems, electrical cosmetic appliances. The max output of the unit is 1500 watts, so the total electric draw must not exceed 1500 from all 4 outlets.

Most appliances have wattage requirements on the product appliance plate

When the lights are out and you only need 1 room to be lit, the 15 LED lights located on the right side of the GG5515 Unit will light the room and use less than 5 watts of power leaving over 99% of the power available for other appliance and power needs.

Two standard USB Ports will accommodate cell phones, MP3 players and any electronic device that can normally be charged by USB Power ports, laptops must be plugged in to one of the 4 AC Power Outlets to charge. Mp 3 Players will electronically transfer their sound to 2 hi fidelity speakers located on the face of the GG5515 unit. Power usage will be negligible.

2 DC Power outlets of 12Volts each are built in to allow recharging of small DC powered appliances and electronics that require automobile type charger power port or cigarette lighter plugs. This feature can also recharge the main battery of the unit when connected with a proper plug to an automobile battery

Alarm and Sound System

The unit's clock and alarm and sound system allows you to set wake-up calls in the morning if standard alarms are not available. The Sound system automatically channels sound from an MP 3 player or similar devices to its dual hi fidelity speakers located on the face of the unit. The display also shows in the form of a battery the current condition of the battery. The unit must be turned on for this feature.

Wheels

4 360 degree full spinning wheels with internal locks allow the unit to be towed anywhere in the home. A tow strap specially designed for the unit is included. When the wheel locks are pressed the unit remains in its position and will not roll away. When unlocked the unit turns in its own space and rolls easily.

Other uses (Auto and sport)

A powerful 12 Volt air compressor is built in to the unit for inflating auto or bicycle tires. Time to inflate is dependent upon the size of the tire and pressure desired. The compressor will generate up to 260 PSI and should not be used on fragile inflatable toys. A gauge that indicates pressure is conveniently located on the front of the unit. The air hose and clamp are located in a special compartment on the side of the unit and are included with the unit,
