please call us toll-free at 1-800-454-BATH.

We would like to take this opportunity to thank you for your
purchase of this American Bath Factory product.

NOBB HILL

User Guide

BEFORE YOU BEGIN

To ensure that no damage has occurred to your bathtub during shipping, it is important to check your bathtub for damage prior to installation in your home!

Move your new bathtub to a location that will not be damaged by water runoff. A driveway or patio is suitable for testing your bathtub.

We recommend that you install the waste & overflow onto the bathtub at this time. This will help with water testing your new bathtub, these parts are highlighted in **Bold Gray Type** (See Fig. 1)

American Bath Factory recommends having a certified plumbing technician install your bathtub

!! IMPORTANT !!

Your bathtub is a DOUBLE WALL construction. The drain needs to be installed with SILICONE, not Plumber's Putty!

Apply a liberal quantity of "kitchen and bath" type silicone (available in most "home" or hardware stores) to the drain threads and a bead on the underside of the Drain Flange (See Fig. 2). Insert the Drain through the drain hole, screw into the Waste Pipe and verify that the rubber gasket is seated properly between the bottom of the tub and the Waste Pipe. The handles of a pair of pliers can help you screw the Drain securely into the Waste Pipe. (See Fig. 3) Wipe off any excess silicone around the drain with a clean, dry cloth.

Allow 24 hours for the Silicone to cure completely before adding water to the bathtub.

If everything is sealed and dry, fill your bathtub 3/4 of the way and check for leaks. After the water test is complete and there are no leaks, proceed with installing your bathtub.
