MAINTENANCE

Your new faucet is designed for years of trouble-free performance.
Keep it looking new by cleaning it periodically with a soft cloth. Avoid abrasive cleaners, steel wool and harsh chemicals as these will dull the finish and void your warranty.

TOOLS

Adjustable wrench
Groove joint pliers
Plumber's putty
Pipe tape
Phillips and flat screwdrivers

SAFETY TIPS

If you use soldering for the installation of the faucet, the seats cartridges and washers will have to be removed before using flame. Otherwise, warranty will be void on these parts
Protect your eyes with safety glasses when cutting or soldering water supply line
Cover your drain to avoid loosing parts

IMPORTANT POINTS

Prior to beginning installation, turn off the cold and hot water lines and open the old faucet to release build-up pressure.
When installing your new faucet, turn the connector nuts finger-tight, then use one wrench to anchor the fitting and a second wrench to tighten the nut one additional turn. Connections that are too tight will reduce the integrity of the system.
Wrap all threaded connections with Teflon tape available at your local hardware or plumbing supply store. Always wrap in a clockwise direction.
All installations can vary depending on how your previous faucet was installed. Not all necessary supplies to install your faucet are included; however they are available wherever plumbing supplies are sold.
