

Why Choose Grand Rapids Chair?

Just Ask

You don't have to limit yourself to Grand Rapids Chair's standard offerings. GRC welcomes the opportunity to create something uniquely you. Special orders are priced, sampled and built quickly for you!

Wood Seating

Grand Rapids Chair's wood chairs are manufactured of premium plain-sawn European beech sourced from sustainable forests and designated a "select and better grade" by the American Hardwood Lumber Association. European beech is the best source for commercial chairs due to its superb strength and grain consistency. GRC enhance the grain with expertly applied finishes and catalyzed conversion varnishes that ensure lasting beauty.

Built Better

Mortise-and-tenon construction is just one of the ways GRC maximizes the strength of their wood chairs and distinguishes themselves from the rest of the pack.

Distressing News

All wood chairs are now available with a "light distressed" or "heavy distressed" finish. The Distressed Winright Collection features handmade textural details accentuated by a matte finish.

In the Saddle

All wood seats feature 1" solid saddle construction for superior user comfort and durability!

Nest-ability

And you thought a chair this gorgeous couldn't possibly be stackable – well, the proof is in the picture!

The Lisa series stacks 6-8 high, not to mention countless other chairs with any type of frame material are stackable as well!

Aluminum Seating

Precision CNC-machinery and carefully engineered weld placement make our aluminum chairs incredibly strong and durable yet surprisingly lightweight. Compare our chair's seamless contours and near-invisible joint welds to the competition – and you'll see why Grand Rapids Chair's such a popular choice for image-conscious companies.

Light on its feet

Every time you specify a lightweight aluminum chair, someone's lower back thanks you!

Metal Seating

Grand Rapids Chair's are manufactured from high-quality plating-grade steel (a significant strength advantage over the industry standard). Joints are hand-tailored, coped and brazed to maximize strength, create a smooth finish, and prevent rust. Paint is applied through an automotive-grade powdercoat system that ensures equal coverage of every surface. The finish is baked-in to create a beautiful, durable, color-rich chair.

Stronger Than the Rest

High-traffic areas require high-quality furniture solutions. All of our chairs and tables exceed industry strengths and standards.

Logos and More

Laser cutting and engraving allow unlimited design options, from simple logos to elaborate graphic compositions.

Back Beauty

Get out your swatches – backs can be upholstered in custom fabric-and-welting combinations for one-of-a-kind looks.

Back to the Wall

Grand Rapids Chair's "wall-saver" chairs feature extended rear legs that help prevent chair backs from hitting – and damaging – your walls!

Plush Comfort

High Resilience foam is considered the Cadillac of cushioning. We use 2 inches of it in all our upholstered seating for an unbeatable combination of comfort, support, and durability.

Rainbow of Options

GRC's state-of-the-art powdercoat system can match any color you want for your metal and aluminum chairs – whether it's a standard PMS tint or the peculiar shade of your favorite candy. Add a custom upholstery fabric and a special laser back design, and you've got a one-of-a-kind signature chair for your business! The options are endless!

Custom Designs

Designers, architects, facility manager: you'll make a big impression on clients and supervisors with a custom cut or engraved logo. We know – Grand Rapids Chair has sold many projects this way!
