Prossage™ heat pain relief

- 100% natural therapeutic warming ointment for myofascial release, deep tissue work and trigger point therapy
- Prossage™ heat developed to produce gentle penetrating heat to the skin, fascia, muscles & other soft tissue structures
- as tissues soften, more blood and oxygen penetrates congested areas reducing the ischemia responsible for many chronic pain syndromes, orthopedic conditions and common sports injuries
- by applying palmer friction techniques, the soft tissues warm, access to deep painful connective tissue adhesions can be faster, more effective, and pain free
- Prossage™ heat is an area specific warming ointment, not an all over bodywork and massage oil
