

INSTRUCTIONS

Line Voltage Display Lighting Fixtures

Models:

DL-024 DL-150 DL-188 DL-701

This display light is designed to be secured on a flat surface. It is supplied with a cord and plug.

It will be necessary to drill a hole not less than 51mm in diameter and not more than 55mm. The hole should be positioned on the top of the display pillar in the center of the mounting surface.

Once this is completed, thread the plug through the hole. Make sure the bracket is positioned so that the slotted holes in the bracket are over a solid wood area. Secure the bracket to the mounting surface with screws provided.

Slide the cover piece over the bracket and secure it to the mounting bracket using the single machine screw.

Adjust fixtures as needed. Plug power cord to an outlet. Assembly is complete.
