

LED Generators

LED Generators may be chosen as single or dual ended light sources. Each end of the rail needs a single-ended generator. An additional dual-ended generator would be used to expand your rail runs past 30'. Mix colors with (2) different colored single-ended generators. Use a different color dual-ended generator to continue with additional lengths of rail.

LED Generator Dual

Dual-ended LED generator. Allows for extending a rail run beyond 30'.
