

Fusion Transformers

All monorail lighting systems require a transformer to convert standard 120 voltage to a safe-to-touch 12 or 24 volts. Fusion Monorail can be powered with surface mounted transformers or with remote transformers.

Surface Mounted Transformers

All Fusion Surface Mounted Transformers are encased in a finished metal housing and mount to any standard ceiling electrical box. Typically, you use a surface transformer when an accessible location above the ceiling or in a utility closet is unavailable for installing a remote transformer.

Direct Feed Surface Transformers

Allows for closest-to-ceiling possible monorail mounting. Each mounts to a standard 4" junction box.
