

Belle Forêt Copper Basin Maintenance

Your Belle Forêt copper basin is a living finish – no two will be identical and any item or liquid coming into contact with your sink can affect the color. Over time, these “Living Finishes” will vary in color and tone, adding character and uniqueness to your Belle Forêt basin.

Please inspect your basin carefully before installing, as Belle Forêt does not warrant the finish after installation.

Maintenance Instructions

- 1) Prior to first use, wipe basin with a dry cloth.
- 2) Wipe dry immediately after each use.
- 3) Applying a soft wax such as “Faucet & Fixture wax” (by Flitz: www.flitz.com/faucetandfixturewax.htm). or Pledge furniture polish can add a temporary protective coating.
- 4) **NEVER** use polishes with abrasives or rubbing compound, nor cleansers with abrasives (including “Soft Scrub” type) on your Belle Forêt basin.

Important to remember: living finishes have no protective coatings. They are designed to change with time and use.

Belle Forêt Weathered Copper and Oil Rubbed Bronze basins are finished to coordinate with Belle Forêt faucet finishes.
