BIDET FITTING

**Installation
Instructions
2000.011**

Thank you for selecting American-Standard...the benchmark of fine quality for over 100 years.

To ensure that your installation proceeds smoothly—please read these instructions carefully before you begin.

Certified to comply with ASME A112.18.1M

M968761

TOOLS REQUIRED

Channel Locks

Adjustable Wrench

Plumbers' Putty or Caulking

Phillips Screwdriver

CARE INSTRUCTIONS:

DO: SIMPLY RINSE THE PRODUCT CLEAN WITH CLEAR WATER. DRY WITH A SOFT COTTON FLANNEL CLOTH.

DO NOT: CLEAN THE PRODUCT WITH SOAPS, ACID, POLISH, ABRASIVES, HARSH CLEANERS, OR A CLOTH WITH A COARSE SURFACE.

1 INSTALL FAUCET

CAUTION

Turn off water at main supply.

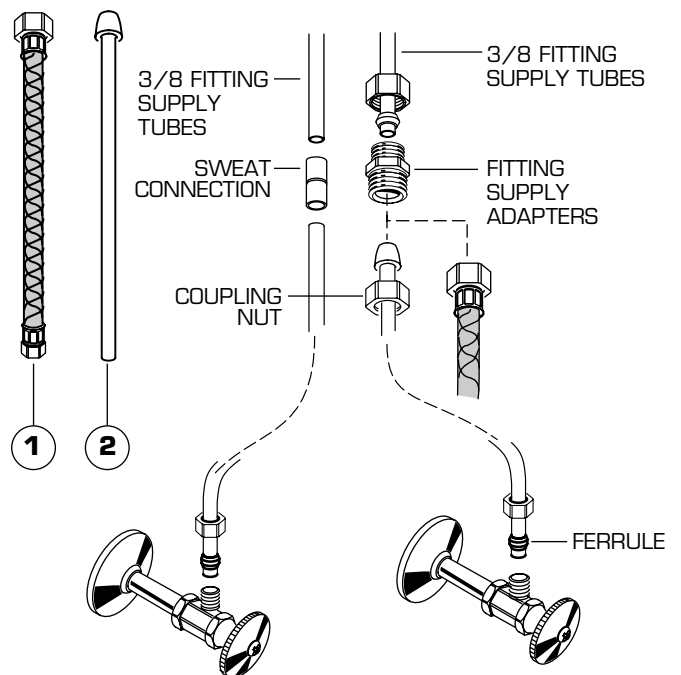

- For 3-hole (4" centers) installation, apply Putty to underside of Escutcheon (optional 4) and place over holes in lavatory sink with tab towards back.
- Feed faucet tubes through Rubber Ring (2) and through hole in Escutcheon (optional 4) or mounting surface. Escutcheon (4) is optional on single hole lavatories. Make sure Rubber Ring (2) is seated in groove in base of Faucet (1).
- From below, push Mounting Gasket (5) and Mounting Washer (6) over Stud (3) and secure with Nut (7), pushing Faucet (1) to back of sink, so Stud (3) rests against sink hole. Before final tightening, adjust Faucet (1) and Escutcheon (4) so that they are centered.
- Insert LIFT ROD (8).

2 MAKE WATER SUPPLY CONNECTIONS

NOTE: FLEXIBLE SUPPLIES OR BULL-NOSE RISERS MUST BE PURCHASED SEPARATELY.

- Turn off hot and cold water supplies before beginning.
- Carefully bend copper supplies on fitting to meet water supply lines using the palms of the hands to avoid kinking.
- Connect HOT water supply line to left tube, and COLD water supply line to right tube using appropriate connectors.
- Connect water supply to FAUCET with 1/2" IPS FLEXIBLE SUPPLIES (1) or 3/8" O.D. BULL-NOSE RISERS (2). Use adjustable wrench to tighten connections. Do not over tighten. Be careful not to kink copper supply when bending. Use tubing cutter to cut to proper length.

3 INSTALL POP-UP DRAIN

- Push Tail piece (11) down into Trap (C) (threaded end up).
- Thread Locknut (5), Washer (4) and Gasket (3) (Bevel side up) onto Drain Body (10).
- Apply a bead of Putty (D) to underside of Flange (2).
- Feed Drain Body (10) up through Sink (A) and thread the Flange (2) fully onto Drain Body (10).
- Tighten Locknut (5) firmly, keeping the pivot rod hole pointed towards the back of the sink.
- Assemble Pivot Rod (9) as shown in Figure-4B. Notice the position of the Concave Washer (G).
- Insert Pivot Rod (9) into Drain Body (10) and tighten Pivot Nut (F).
- Push Tailpiece Insert (12) into Tailpiece (11) and push Tailpiece (11) up and thread tightly into Drain Body (10).
- Position Extension Rod (7) onto Pop-Up Rod (E) and tighten Thumbscrew (6).
- Remove one end of Clip (8) from Pivot Rod (9) by squeezing ends together while sliding.
- Insert Pivot Rod (9) into second or third hole in Extension Rod (7) and reassemble Clip (8).
- Drop Stopper (1) into Drain Body (10).
- Adjust stopper height by repositioning Extension Rod (7) and tightening Thumbscrew (6).

FIGURE-4B:

4 TEST INSTALLED FITTING

- With HANDLE (1) in OFF position, turn on WATER SUPPLIES (2) and check all connections for leaks.
- Remove AERATOR (3).
- Operate HANDLE (1) to flush water lines thoroughly.
- Replace AERATOR (3).
- Operate Pop-Up and fill lavatory with water. Check that DRAIN STOPPER (4) makes a good seal and retains water in lavatory.
- Adjust stopper height by repositioning Pop-Up ROD (5) and tightening THUMBSCREW (6).
- Release DRAIN STOPPER (4) and check all drain connections and "P" trap for leaks. Tighten if necessary.

5 SERVICE

- If faucet drips, operate handle several times from "off" to "on". Do not apply excessive force.
- Clogged CARTRIDGE inlets may cause reduced flow in "full on" hot or cold. To clean inlets, first turn off water supply, then:
 - Remove HANDLE (1), CAP (2), HOT LIMIT STOP (3) and CARTRIDGE (4).
 - Clean inlets and MANIFOLD (5).
- Reassemble CARTRIDGE (4), alternately tightening SCREWS (6). Replace HOT LIMIT STOP (3), CAP (2) and HANDLE (1). Check flow.

6 ADJUST HOT LIMIT STOP

By restricting handle rotation and limiting the amount of hot water allowed to mix with the cold, the HOT LIMIT SAFETY STOP reduces risk of accidental scalding. To set the maximum hot water temperature of your faucet, all you need to do is adjust the setting on the HOT LIMIT SAFETY STOP.

- Remove HANDLE, CAP and HOT LIMIT STOP. Follow "A" or "B" to adjust maximum discharge temperature.

"A"
PRY UPWARD TO UNLOCK
AND ROTATE COUNTER-
CLOCKWISE ONE CLICK

ADJUSTMENT WHEN
WATER IS TOO HOT

"B"
PRY UPWARD TO UNLOCK
AND ROTATE CLOCKWISE

ADJUSTMENT WHEN
WATER IS TOO COLD
