	SPB1016BL	PAN HEAD SCREW	24
	CCPZXX	CAMLOCK COVER CAP	12
	SHPL5	SHELF LOCK	48

TOOL REQUIRED

1

2

Make sure groove on parts E and J should be located at the bottom edge. If it's not- then you had installed it upside down.

Turn camlocks clockwise using flat (preferred) or phillips screwdriver until full stop (slightly over $\frac{1}{2}$ a turn to lock the bolt)

3

Make sure the dowels go in as far possible. They should stick out no more than 3/8 of an inch.

Do not use more than one drop of glue as it may cause board to split.

4

5

Attach part I onto
top A

SPE610BL

6

Use small screws on the back panel between Outer Sides(E) and dividers (J).

Use long screws only on the Outer Sides(E) and dividers (J).

7 Install Back Panels as shown, with unmarked edges facing down and blue or red marked being atop. Make sure the Blue is on the left side and Red is on the right side of each section. Otherwise you will have problem with leveling of the shelves, they will sag in the middle.

8 **OPTIONAL.** If you live in an earthquake zone, we recommend using the anti-toppling device provided to increase the safety in your home. Please follow the diagrams below. We provide two pilot holes in the back of the Top to attach a straps which you can secure to the wall. You can also, at your option secure unit through by screwing the back support (D) to the wall.

9

Do not tap with hammer onto shelf supports, instead twist them when inserting in. You will be using six shelf supports per shelf, two on each side and two in the back.

Install shelves at desired locations. Use a case of CD or DVD as a template to locate positions for the shelves. Start from the bottom. If you skip a hole or mix in one section with CD or DVD/VHS cases, you may end up with some unused space at the top. In other words, to get the maximum capacity, don't skip any holes or mix different kinds of media in one section.

To prevent shelves from sagging, lock the back corners of them from above with two round Shelf Locks.
