UNLOCKED
POSITION

CAMBT12

2

NOTE: Make sure the wood dowels go in as far as possible. They should stick out no more than 3/8 of an inch.

3

Install stretchers H and C on Right Upright B and lock all camlocks. Next align the Left Upright A over the assembly and lock all camlocks.

Turn camlocks clockwise until full stop (slightly over $\frac{1}{2}$ a turn to lock the bolt)

4

Turn camlocks
clockwise until
full stop (slightly over $\frac{1}{2}$ a
turn to lock the bolt)

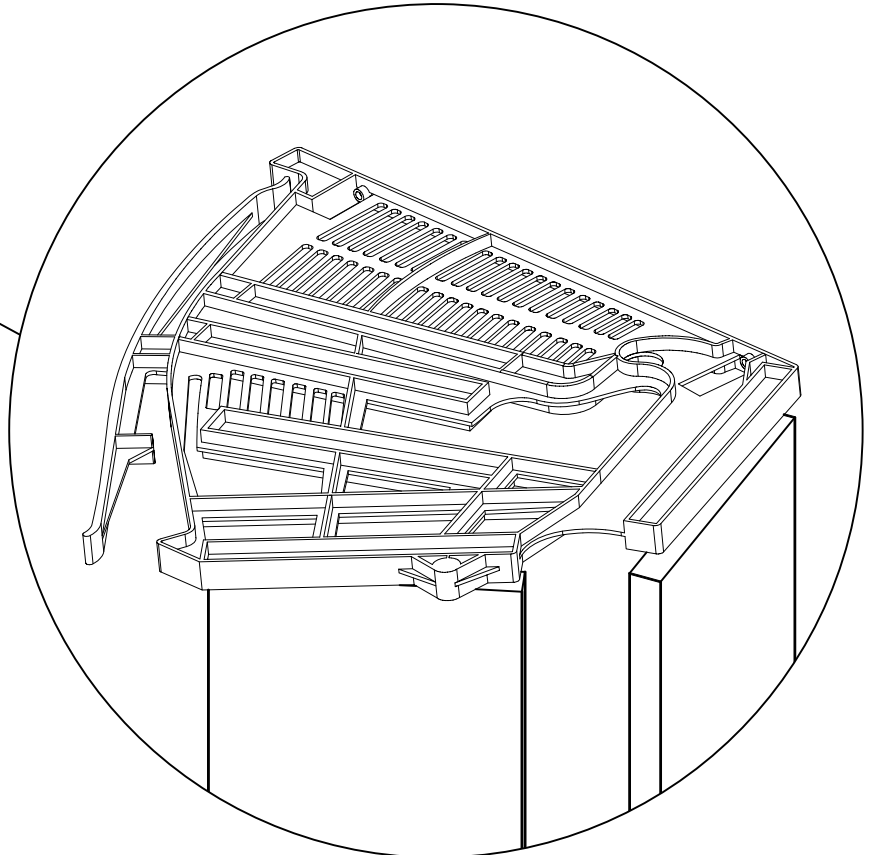

5**NAIL 1734**

Place the unit face down. Align the back panel (G) over the top of the unit. Make sure the assembly is square and leave equal amount of margin all around. Tack the two opposing corners of the back panel down first using nails as shown, then the other two. Next, nail the back panel all around with approximately 2" spacing between the nails. Make sure to keep the nails centered on the edges to avoid splitting of the boards.

6

SFH833A

7

Choose which slots to use for dividers at your option. Should you wish you can eliminate one divider or even both of them.

8

Align the door/shoe rack assembly, tilting it slightly, as shown in the expended view. Pushing slightly inwards on the sides of the plastic shoe rack with both hands, line up both sides of the plastic shoe rack with Part D. Insert and push the door assembly on Part D on both sides simultaneously, using the channel provided on the plastic shoe rack. See the arrow on the diagram to locate the channel/groove. If both sides are inserted correctly, the assembly will drop slightly downwards.

9

Once the door/show rack has been installed, you will need to assemble A, C, & B which acts as a runner for the racks. Insert A into C. Part A should leave a 1/2" gap between the lip of C & A. Next, push together B to the protruding portion of A.

At this point, insert screw through assembled A, B, & C. At least 1/2" of the screw should be exposed at the end of B. Open door half way and insert assembled A, B, & C on to hole on side panels. Screw the assembled runner tightly to the side panels. The shoe rack should roll smoothly on the runner.
