

WINCO DL6000H

The 5500 watts of continuous power delivered by the DL6000H is all the typical homeowner may ever need. This Honda engine driven generator has the strength to bring the output to a full 6000 watts of surge energy!

Built with the reliable Honda GX340 11HP engine this model can start up to a 2HP motor.

The receptacle package consists of four (4) 20 amp 120 volt outputs (NEMA 5-20R) and a 30 amp 120/240 volt (NEMA L14-30R) receptacle. From the 30 amp output, power can be supplied to an optional Manual Emergency Transfer/Service Switch.

The DL6000H comes standard as a recoil start unit; however, if the convenience of an electric option start suits you order the DL6000HE and both starting methods are available.

Options available:

2-Wheel or 4-Wheel Industrial Dolly Kit

Generator Cover

Plug-in Line Voltage Monitor (up to 130 volts)

30 amp (NEMA L14-30P) Locking Plug

Manual Emergency Transfer/Service Kit
