Care and Cleaning Instructions

- 1) NEVER use any cleaner on this product. None of any kind.
- 2) Keep the faucet dry! When you dry your hands, dry your faucet. The water in certain parts of the world can be very caustic. Any standing water around the faucet will damage the protective coating. Remove it as soon as possible.
- 3) Once a week, apply a paste wax or special, non-abrasive, brass coating. (DO NOT APPLY POLISH) This step will add another temporary protective coating.
- 4) Before applying a protective coating, take a soft tooth brush and brush the entire fixture. This will remove any build up.
- 5) For polished brass finish (PB):
The finish, like any decorative finish, must be treated with care. Polished brass is exactly what the name says: brass that is polished and covered with a protective coating. Once that coating is damaged in any way, the brass will oxidize and turn brown. Please follow the above steps to care for your faucet.
