

Tri-Core® ComfortZone™

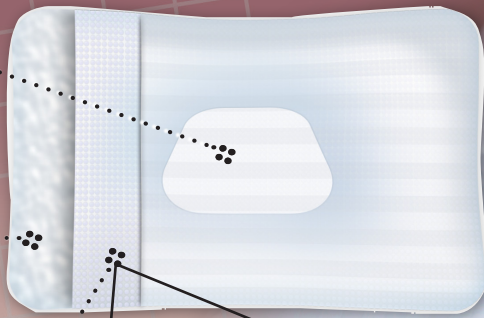

Outlast® Technology Regulates Your Temperature

HOW TO BUY

Indented center provides proper neck support

High-resiliency fiber maintains pillow shape and support

Outlast Thermocules™ keep your temperature in the optimum range for restful sleep

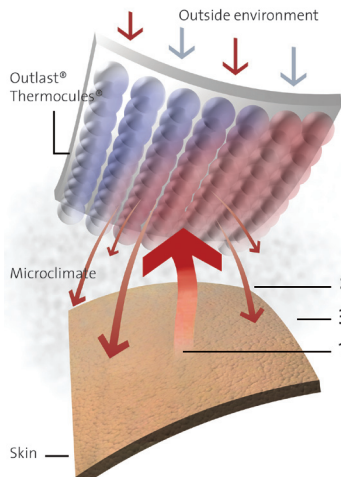

Outlast® Thermocules™ under the microscope

Outlast Technology

Developed by NASA to protect astronauts against temperature fluctuations in space. Outlast Thermocules absorb heat when you get too warm, and release it back when you cool down.

Outlast material is a microencapsulated phase change material (mPCM) that can be blended into fibers, fabrics and coated materials.

Thermal Incompatibility?

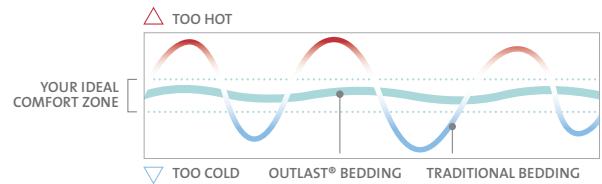

You feel cold. Your sleeping partner feels hot. Before you head to the couch, consider Outlast technology.

1. Outlast® Thermocules® absorb the excess heat.
2. Stored heat is released to the body as needed.
3. The result is a constant microclimate.

Products containing Outlast adapt to your own unique temperature needs, keeping you and your partner more comfortable.

Stay in Your Comfort Zone

No more kicking off the covers due to overheating. By eliminating temperature swings throughout the night, you are less likely to wake up from chills or overheating.

Traditional pillows trap body heat, preventing your body from cooling down and making it difficult to fall asleep. The Tri-Core ComfortZone Pillow with Outlast technology manages the buildup of heat by absorbing excess heat and allowing your head to maintain a more balanced temperature.

Tri-Core® ComfortZone™

New Outlast® Material, Same Orthopedic Support

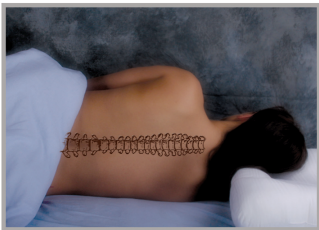

- Trapezoid shaped center cradles the head and firmly supports the neck
- Comfortable for both side sleepers and back sleepers
- High-resiliency fiber maintains shape for durability and comfort

Why the shaped center?

The shaped center provides maximum comfort and flexibility. When sleeping on your back, the center cradles your head to support your neck in its most natural position.

As you roll from your back to one side, the pillow again properly supports your neck. The sides of the pillow is recommended for side sleeping.

The neck is gently held in a comfortable position on the raised section of the pillow. As you roll to your back, the center lets your head nestle for the greatest comfort and appropriate support.

Specifications

Dimensions
